1 INTRODUCTION

Ourview

Our project aims to improve the functioning of an existing recruitment app for the HR management system using salesforce. We achieve this goal by creating custom salesforce object, tab, application, fields, profile, users, permission sets, report that provide easy access to the relevant data.

In this project, we use curstom objects, relationships, page layouts to give the HR team easy access to Data they need on an existing recruitment app.

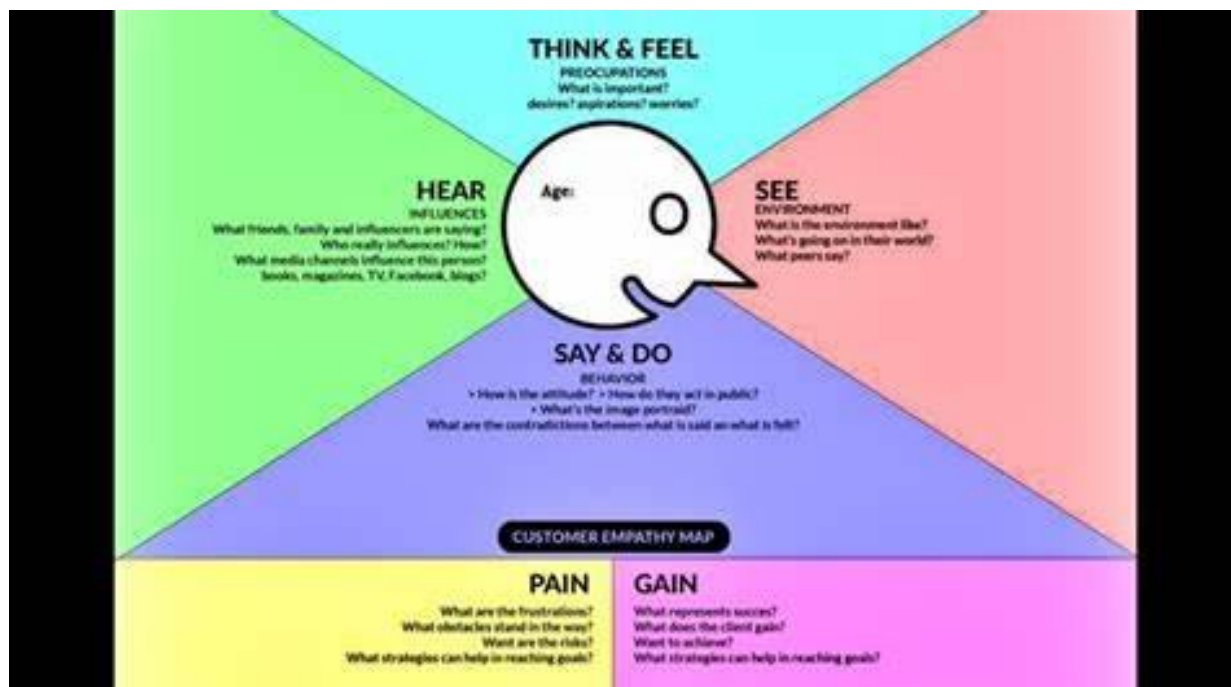

At the start, an HR manager makes planning decisions, such as the time, location, and theme of their event. During an event, HR managers oversee the event live and make sure things run smoothly. After an event, HR managers are tasked with reviewing event data, submitting KPI and ROI findings, and staying on the ball for any post-event offerings.

Purpose

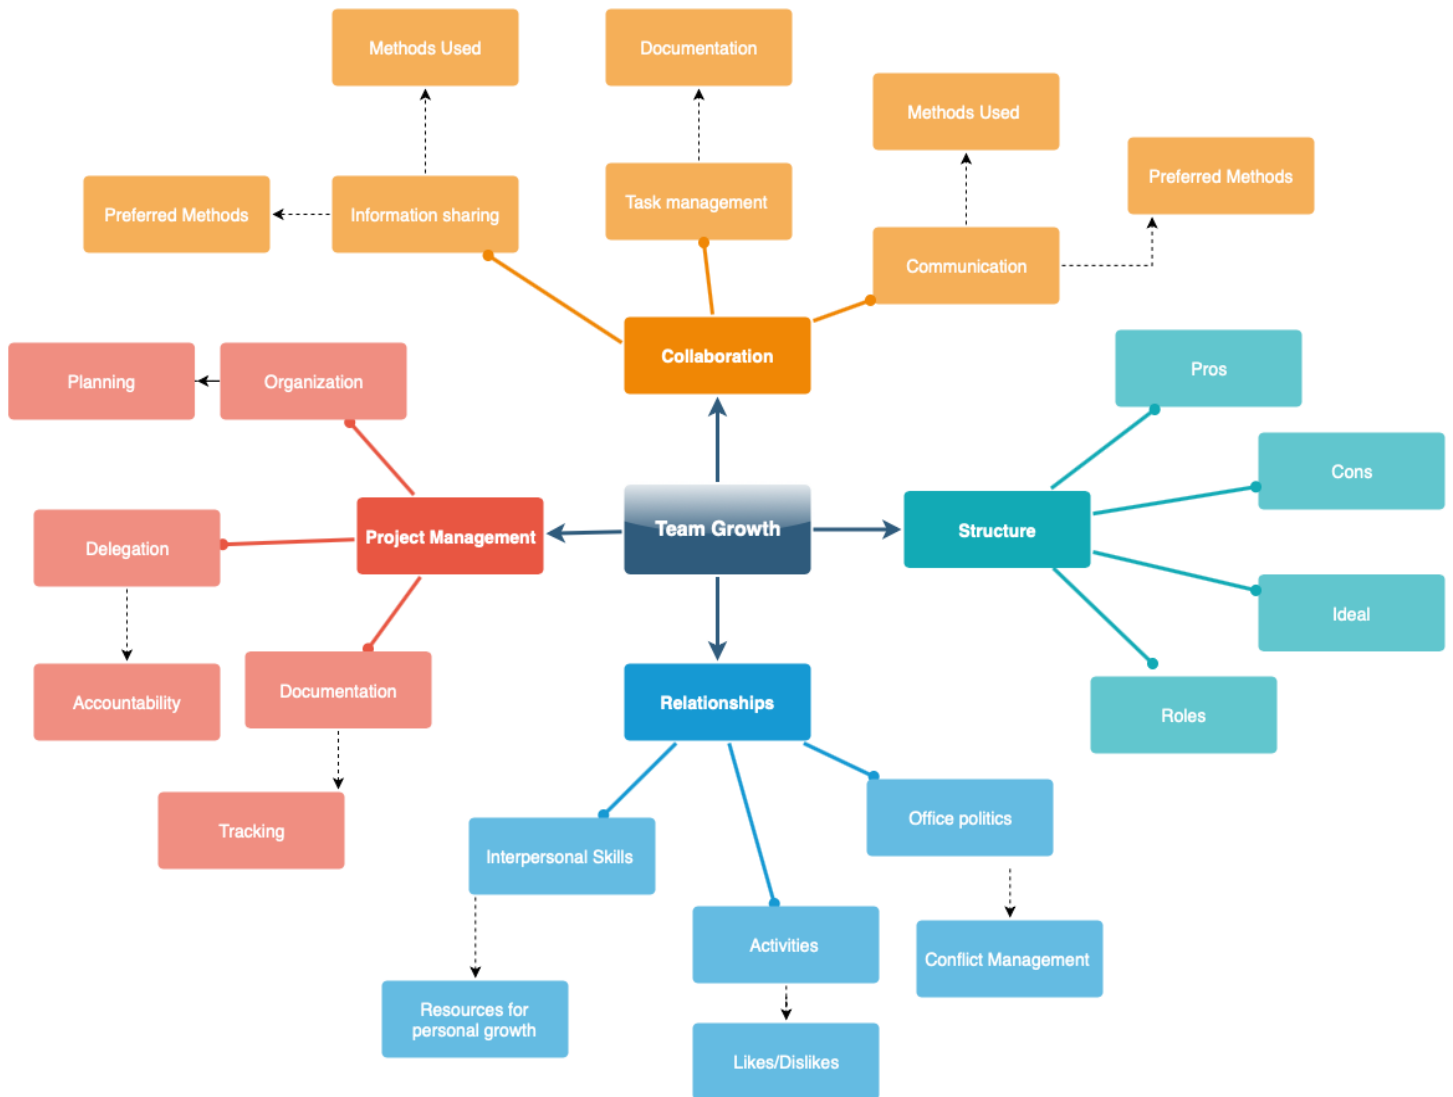

An HR management system with salesforce allows you to access all relevant data in one centralized location your database. You will be able to manage all event relevant tasks without leavingsalesforce, providing you with seamless and comprehensive event-planes experiences.

Quick Actions in the Salesforce Classic Publisher
Actions in this section are currently inherited from the global publisher layout. You can override the global publisher layout to set a customized list of actions for the publisher on pages that use this layout.

Salesforce Mobile and Lightning Experience Actions
Actions in this section are predefined by Salesforce. You can override the predefined actions to set a customized list of actions on Lightning Experience and mobile app pages that use this layout. If you customize the actions in the Quick Actions in the Salesforce Classic Publisher section, and have saved the layout, then this section inherits that set of actions by default when you click to override.
